# Helen Yapı

Endüstri ve Tic. Ltd. Şti.

2009 yılında faaliyetlerine başlayan Helen Yapı Endüstri ve Tic. Ltd. Şti., klasik mimari çizgilerin ötesine geçmeyi, teknolojiden faydalananarak sektörün ihtiyaçına yönelik ürünler tasarlamayı, müşterilerinin talepleri doğrultusunda çözüm üretmeyi ve piyasadaki rekabet güçlerini artırmayı amaçlamaktadır. Firmamız Tuzla Organize Deri Sanayi'nde 2000m<sup>2</sup> kapalı alanda üretim yapmaktadır.

Cevre duyarlığını ön planda tutan Helen Yapı, dış cephe sektöründe yeni olan RRG sistemini kullanmaktadır. Bu sistem geri dönüşüm camlarının ileri teknolojiden faydalananak cam kürecikler halini alıp daha sonra çeşitli takviye katkılalar ile bu ürünlerin sıkıştırılması sonucunda meydana gelmektedir. Ürünlerimizin çevreye duyarlılığı ve estetik görünüşünün yanında hafifliği, dayanıklılığı, sahada uygulama kolaylığı, ısı ve ses izolasyon özelliklerinin oluştu sektöründe kısa sürede fark edilip firmamiza hızlı büyümeye imkanı sağlamıştır.

Kuruluşundan bu yana kaliteden ve müşteri memnuniyetinden ödün vermeyen Helen Yapı, müşterilerine daha iyi hizmet verebilmek amacıyla, dinamik ve yenilikçi kadrosu ile kendini sürekli geliştiren aynı zamanda dünyadaki teknolojik gelişmeleri yakından takip eden bir yapıya sahiptir.

AR-GE çalışmalarını Tübitak ile birlikte yürüten Helen Yapı, ülke ekonomisine faydalı çalışmalara imza atması sebebiyle Tübitak tarafından başarı belgesine layık görülmüştür.

Helen Yapı Endüstri ve Tic. Ltd. Şti which started its activities in 2009 aims to move beyond the classic architectural line, design for the need of sector by utilizing technology, prepare solutions accordingly demands of clients and increase the competitiveness. Our company makes production in Tuzla Organized Industrial Area in 2000 m<sup>2</sup> closed area.

Helen Yapı is using RRG system and shows its susceptibility to the environment. This system is consisted from compressed glass spheres which were formed from recycled glasses by advanced technology and it is reinforced with some additional raw materials and chemicals. Our environment friendly products and esthetic view beside lightness, durability, ease of application, sound and heat insulation characteristic enabled our company realized in the construction sector and rapid growth.

Helen Yapı which never make concessions to quality and customer satisfaction, has a structure to follow latest developments and improving itself with innovative and dynamic team in order to provide better service to its clients.

Carrying out the Research & development facilities with Tubitak, Helen Yapı was granted award of certificate of achievement by Tübitak due to succeeding beneficial studies. Products of Helen Yapı are under patent protection.

Ürünlerimiz **TÜBİTAK** tarafından desteklenen  
Ar-Ge çalışmaları neticesinde geliştirilmiştir.

İlgili: 02/11/2012 tarihli yazınız

TÜBİTAK Teknoloji ve Yenilik Destek Programları Başkanlığı (TEYDEB) desteklenen ISI VE SES YALITIMLI MALZEME GELİŞTİRİLMESİ başlıklı ve 7110482 numaralı projenizin, 01.07.2011 / 30.06.2012 tarihleri arasındaki faaliyetleri desteklenderek ve projenin son dönemine ilişkin teknik ve mali değerlendirmeler yapılarak, proje destek süreci 11.10.2012 tarihi itibarıyle tamamlanmış ve proje öngörülen hedefler doğrultusunda başarı ile sonuçlanmıştır. Şahsınızda firmanızı ve tüm proje personelini, proje faaliyetlerindeki başarılı çalışmalarından dolayı kutlarım.

Kamu Ar-Ge desteklerinin nihai amacı, mikro ölçekte sağlanan destekin, makro ölçekte sosyo- ekonomik ve bilimsel kazanımlara dönüştürülebilmesidir. Başarıyla sonuçlanan proje çıktılarının en kısa sürede ticarileştirilerek beklenen yararların sağlanması Kurumumuzca beklenmektedir.

Araştırma, teknoloji ve ürün geliştirme faaliyetlerinizdeki süreklilik çerçevesinde, Ar-Ge personeliniz ile gerekçinde üniversite ve araştırma kurumlarınızdan alacağınız katkılarla oluşturacağınız yeni proje başvurularınızı bekler, çalışmalarınızda başarılar dilerim.

Klasik mimari çizgilerin, modern mimariye adaptasyonuna olanak sağlayan Helen Yapı Dış Cephe Panel Sistemleri ve Dekor Profilleri; sonsuz tasarım seçenekleri ve kolay uygulanabilirliği ile günümüzün vazgeçilmez yapı malzemesi haline gelmiştir.

Helen Yapı, Almanya'dan alınan "know-how" ile Türkiye'de RRG sistemini kullanarak hafifletilmiş panel sistemleri ve dekor profilleri üretmektedir. RRG sistemi, atık ve hurda camların 800 derecede ısıtılması ile oluşturululan cam küreciklerinin kalıplanarak istenilen form ve kesitlere dönüştürülmesiyle oluşturulur.

Sistemi oluşturan cam kürecikleri 0,25 mm'den 16 mm'ye kadar 6 farklı çapta üretilirler. Bunun yanında 0,04 mm'den 16 mm'ye kadar özel boyutlarda da cam kürecikler üretmek mümkündür. Genleştirmiş cam kürecikler; dış cephe izolasyon panellerine ciddi oranda hafiflik, %40 termal izolasyon değer artışı sağlayarak yapıya ses izolasyonu, akustik değerler, nem dayanımı, bakteri ve küp gibi oluşumlarla karşı direnç ve nefes alabilen yapı özelliği kazandırır. Üretim prosesinde genleştirilmiş olan cam kürecikler sıcak veya soğuk hava koşullarında genleşmeye uğramaz.

Helen Yapı Facade Panel Systems and Décor Profiles which enables adaptation of classical architectural lines to modern architecture; have been the irreplaceable building material of nowadays with eternal design options and ease of application.

Helen Yapı by RRG system manufactures lightened panel systems and décor profiles by "know - how" taken from Germany. RRG system is consisted from recycled glasses which have been manufactured by heating of glasses in 800 degree and molding of these glass spheres as required sections and forms.

Glass spheres consisting the system are manufactured from 0,25 mm up to 16 mm in 6 different diameters. Besides it is possible to manufacture from 0.04 mm up to 16 mm private dimensions of glass spheres. Expanded glass spheres, enables the construction serious lightening, 40 % thermal insulation value increasing, sound insulation, acoustic values, humidity endurance, resistance for bacteria and mold formations and breathing. Glass spheres which have been expanded during the manufacturing process are not expanded in hot and cold weather conditions.

### ÇEVRE DOSTUDUR

ENVIRONMENTAL FRIENDLY

Helen Yapı ürünlerinin hammaddesi, geri dönüşüme giden camlardan üretilmektedir. Ürünlerimizden doğaya gaz salınımı olmadığı gibi doğada kullanımı sonlanmış ürünler tekrar kullanılabilir hale getirerek çevre kirlenmesini önlemektedir. Çevreye duyarlı bir dış cephe malzemesidir.

Raw materials of Helen Yapı products are manufactured by waste glasses sent for recycling. As our products have no gas emission, beside prevent the environmental pollution by using the products of which usage lives ended by transforming into usable conditions. It is an environmental friendly facade material.

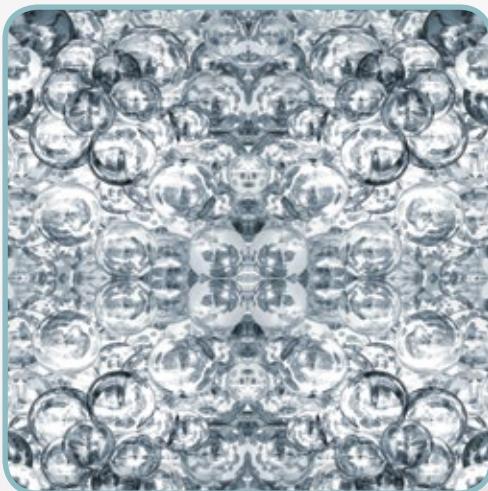

### HAFİFTİR UYGULAMA KOLAYLIĞI SAĞLAR

IT IS LIGHT AND ENABLES EASY IMPLEMENTATION

Ürünlerimizin yoğunluğu  $0,38-0,42 \text{ kg/dm}^3$  aralığındadır. Ürünlerimizin hafif olması binaya minimum yük getirdiği gibi dış cephede ankray sisteme ihtiyaç duyulmamasını sağlar. Yapıştırma ve vidalama işlemi ile cepheye rahatça uygulanabilir. Rahat uygulama olağanlığı sayesinde sahada uygulama maliyetlerinin düşmesi yanında montaj esnasında oluşabilecek olası kazalar veya ürünün zedelenip kullanılamaz hale gelmesi ihtimalleri ortadan kalkar.

Density of our products is between 0,38 - 0,42 kg/dm<sup>3</sup>. As the lightness of our products put minimum load to the building, it doesn't need any extra framework on facade. It can be applied easily with adhesive and screws. Application costs in field decrease and possible accidents are prevented because of the lightness and easy application process of product.

### GENLEŞME YAPMAZ

IT DOESN'T EXPAND

Ürünlerimizin ana hammaddesi olan cam kürecikler, geri dönüşüme giden camlardan meydana gelmektedir. Bu camlar önce küçük tanecikler haline getirilinceye kadar ezilir daha sonra yüksek ısıda toz haline getirilip çeşitli proseslerden geçtikten sonra genişletirilir ve cam kürecikler halini alır. Son olarak eleklerden geçirilerek istenilen çaplarda ayrıştırılır. Kendinden genişletilmiş cam kürecikler, soğuk veya sıcak hava şartlarına göre cephede oynamaya yapmaz yani genişmez. Aynı şekilde ürünlerin birleşimi, ek noktalarda herhangi bir çatlama, ayrışma veya açılma meydana gelmez. Bu özelliği dolayısıyla bina üzerine uygulanan ürünün ömrü binanın ömrü kadar olur.

Glass spheres which are the main raw material of our products consist of glasses sent for recycling. These glasses are first crushed to small particles then pulverized with the help of high temperature. After different processes it expands and take the sphere shape and finally, sieved for required diameters. Pre-expanded glass spheres will never expand again according to the hot and cold weather conditions. Also any crack, disintegration and opening are not occurred at joint and junction points. Because of mentioned reasons, lifetime of finished product is same as building's lifetime.

**ISI YALITIMINA KATKIDA BULUNUR***IT CONTRIBUTES TO HEAT INSULATION*

Doğrudan ısı yalıtım malzemesi olarak kullanılmamasına rağmen dekor profillerinin ısı iletkenliği oldukça düşüktür ve ciddi oranda ısı yalıtımına katkıda bulunur. Örnek vermek gerekirse; İsi yalıtım malzemesi olarak kullanılan EPS'nin ısı iletkenlik katsayısı 0.03-0.04 W/m.k aralığında, taş yünü ise 0.035-0.04 W/m.k aralığındadır. Bu katsayı RRG sistem ürünlerinde 0.09-0.10 W/m.k aralığındadır.

Although it is not be used directly as a heat insulation, our décor profiles' heat conductivity is low and it contributes to heat insulation of buildings. For example; EPS which is used for heat insulation has a value between 0.03-0.04 W/m.k and Stone wool has a value between 0.035-0.04 W/m.k. RRG system products has a value between 0.09-0.10 W/m.k.

**SUYU BÜNESİNDE BARINDIRMAZ***IT DOESN'T RETAIN WATER*

Su emme oranı ham hali ile (astar ve boyacı öncesi) %2 civarındır. Kullanılan boyanın kalitesine ve özelliklerine bağlı olarak bu oran %1'in altına rahatça düşebilir.

Water absorption value is about 2% as raw material condition (before primer and dye). This ratio could easily reduce less than 1 % according to quality and characteristic of dye.

**RMI***RMI*

Ürünlerimizin testleri Almanya merkezli olan Dr.Robert Murjahn Enstitüsü Bilimsel Araştırma Merkezi Gebze laboratuvarlarında TS EN ISO standartlarına göre yapılmaktadır.

Tests of our products are carried out by Dr.Robert Murjahn institution scientific Research center Gebze Laboratories according to TS EN ISO standards.

## Poraboard

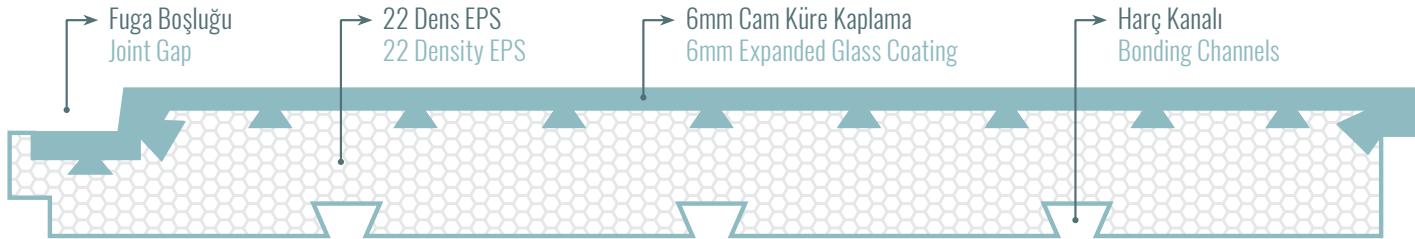

- Desenli plakaların cam küreçik kalınlığı 8 mm, düz plakaların ise cam küreçik kalınlığı 6 mm'dir.
- Köpük üzerindeki cam kürelerin sertliği sayesinde yüksek oranda darbe dayanımına sahiptir.
- Paneller tamamen kalibre edildiği için cephede işçilik kaynaklı oluşan hatalar ortadan kalkar.
- Panellerin arka yüzünde bulunan kırlangıç kuyruklarına sadece yapıştırıcı sürüllererek cepheye montaj işlemi gerçekleştirilir. Dübele ihtiyaç yoktur. Boya ve dış cephe macunu ile finish yapılır.
- Panellerin ağırlığı 4kg/m<sup>2</sup> civarındadır. Hafiftir ve uygulaması kolaydır.
- Üretim aşamasında genleşmesini tamamlamış cam küreçikler cephede tekrar genleşme yapmaz. Ek noktalarda oynama, açılma veya çatlama yapmaz.
- Yatay ve dikey ek noktalarda deniz tutkulu kullanılır.
- Patterned boards have 8 mm glass sphere thickness while regular board has 6 mm.
- Because of glass sphere's hardness, Poraboard has high impact resistance.
- Fully calibrated boards will remove the labor based mistakes.
- Only adhesive will be used on the back side of board which has reverse angles during facade application. Screw is not needed. Application will be finished with dyeing.
- It's weight is around 4kg/m<sup>2</sup>. It is light and easy applicable.
- Glass sphere's expansion is finished during production process. That is why it is not going to expand on the side and it is not going to occur any problems at connection areas.
- Sea glue should be used for both horizontal and vertical connection part of boards.
